Java

```java
class Solution {
    public int[] stringIndices(String[] wordsContainer, String[] wordsQuery) {

    }
}
```

JavaScript

```javascript
/**
 * @param {string[]} wordsContainer
 * @param {string[]} wordsQuery
 * @return {number[]}
 */
var stringIndices = function(wordsContainer, wordsQuery) {

};
```

TypeScript

```typescript
function stringIndices(wordsContainer: string[], wordsQuery: string[]): number[] {

};
```

C++

```cpp
class Solution {
```

```cpp
public:
    vector<int> stringIndices(vector<string>& wordsContainer, vector<string>& wordsQuery) {

    }
};
```

C#

```csharp
public class Solution {
    public int[] StringIndices(string[] wordsContainer, string[] wordsQuery) {

    }
}
```

Kotlin

```kotlin
class Solution {
    fun stringIndices(wordsContainer: Array<String>, wordsQuery: Array<String>): IntArray {

    }
}
```

Go

```go
func stringIndices(wordsContainer []string, wordsQuery []string) []int {

}
```
